SCOTCH PINE
... pruning pays off!

Some of my friends in the nursery business think I picture too dark an outlook for Christmas tree growing because I'm always harping about the proper care of seedlings, getting them in the ground at the right time, spraying and pruning and everything else that goes into good Christmas tree plantation management. But why kid ourselves? Folks who operate profitable plantations don't just stick the seedlings in the ground, then rest for five years while waiting to harvest dollar bills.

As we have said so often before, we believe there will always be a market for good quality trees. Every year this is proven more forcibly. Proper culturing of Christmas trees is pretty well covered by the various university bulletins . . . take advantage of them.

Incidentally, we have found that in our area June 15-August 1 is the best period for pruning Scotch pine, June 15-July 1 for Austrian and Red pine.

We prune our own Scotch pine around July 10 and believe the late pruning solves our shoot moth problem.

This item belongs in our spring price list . . . but, lest we forget, here's a word of advice to those who will be lining out seedlings or transplants next year: Trees should be planted as soon as possible after the ground thaws! Earlier they are in, the better they will withstand a summer drought.

Six weeks after the ground thaws -- if you don't have irrigation facilities -- put your money in postal savings and invest in trees next year!

Those of you who have been on our mailing list for years know how we've always bragged about our packing methods. For some time we've been using techniques perfected by Iowa and Michigan State universities, using polyethylene, reinforced with burlap and the best moisture-holding peat moss we could find.

Our big news: Our peat moss is better than ever . . . at least we like to think so, because we recently bought our own peat bog and have been floundering around in it most of the summer, trying to figure out how to get the stuff out. So, when you receive your next shipment from us, for gosh sakes, don't throw the peat moss away . . . you have no idea how valuable it is!

Sincerely,

Paul Amint
